

## Call transfer with Zoiper for Android

### Zoiper for Android

#### What is Zoiper for Android?

Zoiper for Android is a SIP and IAX2 capable softphone.

#### What is Call Transfer?

Call transfer is the capability to transfer the active call to another party.

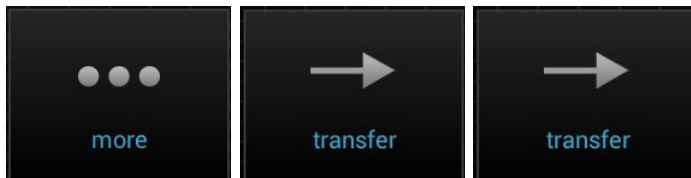

Zoiper supports Attended and Unattended call transfer.

Zoiper is using the SIP REFER method to do the call transfer.  
Please make sure your server supports it.

### Call transfer with Zoiper for Android

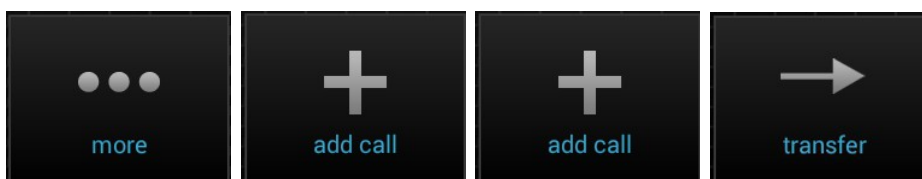

#### Unattended call transfer

1. click the **more** button in the active call window;
2. click the **transfer** button to initiate the call transfer;
3. type the number of the contact you would like to transfer the call to;
4. click the **transfer** button again to transfer the call;
5. The call will be transferred to the remote recipient.

#### Attended call transfer

1. click the **more** button in the active call window;
2. click the **+** button in the active call window;
3. enter the number of the contact you would like to transfer the call to;
4. press the **+** button again to put the first call on hold and dial the second number;
5. notify the remote party that you are going to transfer a call to them;
6. in the active call window, press the **transfer** button to transfer the call.

Call transfer is a Gold feature. It is available as an in-app purchase.  
It is not available in the free versions of Zoiper for Android.
